Gerardo Benitez

AI Engineer | Full Stack Developer | Python | FastAPI | RAG | Langchain | Javascript | NodeJs | ReacJs | AWS | Docker
Buenos Aires, Buenos Aires Province, Argentina

Summary

Backend Developer 9+ years building scalable distributed systems in Python and NodeJs (Javascript/Typescript), Microservices, event-driven architectures, AWS serverless, Technical Lead during 2 years, I worked at JP Morgan Chase, Currently in a US startup, Deep knowledge of OOP, SOLID and software design principles.At Forward Platform, we needed to accept payments from various sources (PayPal, Money, bank transfers, among others). I designed a scalable, event-driven architecture using Apache Kafka to address this requirement; I implemented unit and integration test coverage and documented the entire solution. This architecture processes 10,000 transactions daily, with peaks of 100,000 for specific events.

Experience

FORWARD Platform
4 years 6 months

Back End Developer
May 2022 - Present (4 years 6 months)
San Francisco, California, United States

* I freed the CTO from 1 hour of manual work per day, avoiding errors and automating a key business process, It is a solution created with Apache Airflow, FastAPI, Rabbit/Celery and the Google Sheet API.
Define architecture, dockerize the solution

* To decouple and centralize the communication as a service I created an API to send Sms, Emails, Whatsapp. Dockerize the solution

* Developed and maintained microservices using Node.js (NestJS) and Python (FastAPI, Flask, Django).

* Integrated third-party APIs such as PayPal, Twilio, Google APIs, and AWS.

Created with Master PDF Editor. For non-commercial use only.

* Implemented unit testing and process automation with CI/CD.

* Managed AWS infrastructure with serverless solutions.

Full Stack Engineer
May 2022 - Present (4 years 6 months)

- Payment ecosystem with Paypal, Bank integration, MoneyGram, Western Union, it is a event-driven system
- System to replace a manual process executed by the CTO. freeing it up in 20 hs/month for strategic operations
- Decouple and centralize communication, creating APIs to send Sms, Emails, Whatsapp using queues.
- Developed and maintained microservices using Python and Javascript.
- Manage AWS infrastructure with serverless solutions, API integrations: PayPal, Twilio, Google, and AWS

Tools: AI + SDD (Spec Driven Develepment), Python, FastAPI, Django, Flask, AWS (Lambda, ApiGateway, S3), PostgreSQL, RabbitMQ, Celery, Kafka, NodeJs, NestJs, ReactJs, Apache Airflow, Docker, CI/CD, Git, SqlServer

ComprandoEnGrupo.net
Back End Developer
January 2021 - May 2022 (1 year 5 months)
Cordoba, Córdoba, Argentina

• Improved integration between internal systems, customer acquisition website, and Bitrix24 CRM, streamlining customer contact processes.
• Dockerized solutions to enhance deployment efficiency and scalability.
• Implemented message queues using RabbitMQ and Celery to decouple services and reduce active custom wait time.

Tools: Python, FastAPI, Django, Flask, PostgreSQL, AWS, RabbitMQ, Celery, AWS (Lambda, ApiGateway, S3,
EC2), Docker, CI/CD, Git

JPMorgan Chase & Co.
Back End Developer
June 2019 - January 2021 (1 year 8 months)
Greater Buenos Aires

* Objetive: reduce 20% of operations cost

I led the design and implementation of an end-to-end portfolio optimization system, developed with Python and the Tornado framework, to address uniformly applied operating costs. The project included the creation of a secure integration layer with the core transactional system (Athena) and a robust

For non-commercial use only.

validation module that ran financial simulations against strict risk thresholds. Thanks to its adoption, the system achieved a 20% reduction in portfolio operating costs while maintaining 100% risk compliance

* Developed transaction and financial data processing systems.

* Integrated multiple APIs for banking operations management.

Grupo MSA S.A.
Back End Developer
May 2017 - June 2019 (2 years 2 months)
Buenos Aires

* Create web applications to manage elections systems
* Mantain and extend vote machine's software
* Mantain and extend mobile application to send telegram with voting information

KIU System Solutions
Full Stack Developer & Technical Leader
December 2012 - May 2017 (4 years 6 months)
Buenos Aires Province, Argentina

• Developed robust APIs for external clients using Django and Flask, enhancing integration capabilities.
• Created dynamic websites with Django and Symphony, improving user engagement and experience.
• Led a full-stack team of 5, fostering collaboration and innovation in project delivery.

Full Stack Engineer
August 2003 - May 2017 (13 years 10 months)

- Software Engineer, 2 years as Technical Lead from 2015 to 2017, my team had 5 members (BE, FE, QA).
Tools: Python, Php, Mysql, Linux, Jquery, Asp, Flash, Action Script.

Interacel
Full Stack Developer
May 2011 - November 2012 (1 year 7 months)
Argentina

• Developed responsive websites to manage content specifically tailored for mobile devices.

Created with Master PDF Editor. For non-commercial use only.

• Created engaging trivia and games optimized for mobile browsers to enhance user interaction.
• Engineered a robust content delivery system for mobile platforms, ensuring seamless access to information.

CORE SECURITY TECHNOLOGIES LIMITED
Full Stack Developer
January 2008 - June 2011 (3 years 6 months)
Buenos Aires

• Developed corporate, extranet, and intranet websites using PHP and JavaScript, enhancing user experience and accessibility.
• Created desktop applications in Python and Bash, streamlining internal processes and improving efficiency.
• Designed console applications for data processing, ensuring accurate and timely information handling.

Education

Universidad Nacional de La Matanza
4to Año - Ingenieria en informática · (2015 - 2018)

Created with Master PDF Editor. For non-commercial use only.
